

$$\left(\frac{dr}{n}\right)^n - 1$$

$$R = K[x, y, z], I = (xy, xz)$$

Quiz 5

①

x	0	1	3	4
$f(x)$	3	6	12	24

$$b = \frac{ab^1}{ab^0} = \frac{f(1)}{f(0)} = \frac{6}{3} = 2$$

$$b^2 = \frac{ab^3}{ab} = \frac{f(3)}{f(1)} = 2$$

$$b = \sqrt{2}$$

Not an exp.

$$\begin{aligned} \textcircled{3} \quad b) \quad \text{e. air} &= \left(1 + \frac{r}{n}\right)^n - 1 \\ &= \left(1 + \frac{.25}{12}\right)^{12} - 1 \end{aligned}$$
